

# Reconnecting the Google Drive Assignments App for Students

The Google Drive Assignments App leverages the permission-sharing capabilities of Google Drive.

A student copy of the assigned document is created when a student opens an assignment using the Google Drive Assignments App. This copy is only shared with the instructor who created the assignment and the student who opens it.

Sometimes, errors can occur for students using this workflow because:

- A student attempts to view a file and discovers they no longer have access. A Google account and/or privileges had previously given them access to the file, but now **they are using a different Google account** and cannot access it.
- A student attempts to view a file and discovers they no longer have access. They are logged into Schoology but are **not actually logged into a Google account**.

These errors can be resolved by logging out of the Google Drive Assignments App and logging back in.

**Schoology has added a link to make this process easier.**

This allows students to reconnect to the app with the correct Google Drive account and load the document successfully.

This link appears for students viewing their own documents in the My Document tab.

1. If you cannot open a Google Drive assignment, click the Click here link in your My Document tab.

2. This will launch a new window prompting you to log in with your MCS Google Drive account. This should allow you to open the Google Drive Assignment.
